

33 Solutions LLC

33 Solutions LLC is a technology consulting firm with over 20 years of experience on thousands of technology projects for hundreds of clients.

Our expertise spans software engineering, data engineering, artificial intelligence, and big data platforms. With over 500 projects completed across the country, we provide a wealth of knowledge and experience for any contract, big or small.

CAPABILITIES

Data Engineering & Big Data

We design and manage data ecosystems using Postgres, MongoDB, Hadoop, Apache Spark, and more. Our expertise includes pipelines, large-scale processing, migration, and analytics—helping agencies turn big data into real-time insights.

Software Engineering

We build net new systems and modernize legacy platforms. Our specialty is creating highly scalable and performant applications, with expertise in Python, C/C++, and full-stack web development.

Cloud & Infrastructure

We deliver secure cloud and on-premise infrastructure, with deep experience in Kubernetes. We design, migrate, and manage environments that power enterprise-scale big data and mission systems.

AI, Machine Learning & RAG

We have been developing AI solutions for over a decade—long before the recent GenAI wave. Since 2012, we've delivered real business value using machine learning models like KNN and recommendation systems following the AlexNet breakthrough. Today, we design advanced AI, ML, and retrieval augmented generation (RAG) systems that go far beyond chatbots, supporting automation, analytics, and intelligent decision-making across mission workflows.

Consulting & Advisory

We provide mission-focused consulting in IT strategy, cybersecurity, cloud, and emerging technologies. Our experts help agencies modernize securely and align technology with objectives.
